Questions

Appendix

Fund Solvency Metrics

- **Reserve vs. Net Fund Balance (net of outstanding contributions and claims payments):**
 - The reserve represents the funds required to be set aside in respect of the expected cost of claims for events that have already been incurred, but for which corresponding benefits have not yet been paid.
 - The target recommends the net fund balance should be at least one third of the reserve as a measure of the capacity of the funds to cover additional incurred claims not yet paid.
- **Contributions vs. Net Fund Balance (net of outstanding contributions and claims payments):**
 - This measure is an assessment of adequacy of net fund balance to cover inadequate contributions during the year should claims run higher than expected.
 - The target recommends the net fund balance should at least cover one third of next year's contributions.
- **Adverse Losses Over One Year vs. Net Fund Balance (net of outstanding contributions and claims payments):**
 - This measure is an assessment of adequacy of net fund balance to cover adverse losses.
 - Adverse losses were determined based on a stress-test analysis of claims against changes in duration and incidence levels. The specific adverse scenario selected reflects losses generated with a 50% increase in incidence for FY 2025.
 - The target recommends that the financial net activity in a year with adverse losses is less than half of the net fund balance (i.e., net fund balance should cover at least two years of adverse losses)

Reliances and Limitations

- Spring's analysis and projections are based on a number of assumptions and information from the Connecticut Paid Leave Authority (the "Authority") and Aflac. Other than a general review for reasonableness, Spring has not independently verified any of the information received from the Authority or its service providers. Where data was unavailable or incomplete for certain plans, Spring used industry experience to estimate missing values
- The accuracy of these projections depends on how well future experience conforms to assumptions. Actual experience may be more or less favorable than the assumptions underlying the projections. To the extent that actual experience differs from the assumptions underlying these projections, so will the actual results differ from the results in these projections
- Spring is not a tax, legal or accounting firm – the Authority's advisors should review these areas in light of the Authority's unique facts and circumstances
- Please refer to the Annual Actuarial Report as of June 30, 2023, dated July 24, 2023, for additional information on data, assumptions and methods. This document is incomplete without the accompanying discussion
- Exhibit numbers may not add due to rounding
